

Part 1: Given the equation find the amplitude, period, vertical shift and phase shift.

1) $y = 2 \sin 4(x - \frac{\pi}{4}) + 3$ Amplitude: 2
 Period: $\frac{2\pi}{4} = \frac{\pi}{2}$ Phase Shift: $\pi + \frac{\pi}{4}$ Vertical Shift: up 3

Part 2: Given the graph find the amplitude, period, vertical shift and phase shift. Then write the equation.

Amplitude: 3 Phase shift: None
 Vertical shift: None Period: ~~pi~~ 2π

Sine Equation: $y = 3 \sin 2x$

3. The table shows the height of a spring in cm after x seconds.

seconds	0	2	5	8	10	12	15	16	18	20	21	23
Height	1.0	3.2	6.2	10.4	9.5	6.8	3.4	1.2	3.6	6.5	8.4	10.0

- a) Find a sine equation for that gives height as a function of time. $y = 4.2 \sin(.41x + 1.89) + 6.17$
- b) What is the period for this function? $\frac{2\pi}{.41} \rightarrow 15.32$
- c) Use your equation to predict what the height will be in 1 minute. 3.39
- d) What is the average height of the spring? 6.17
- e) What is the max and min height of the spring?

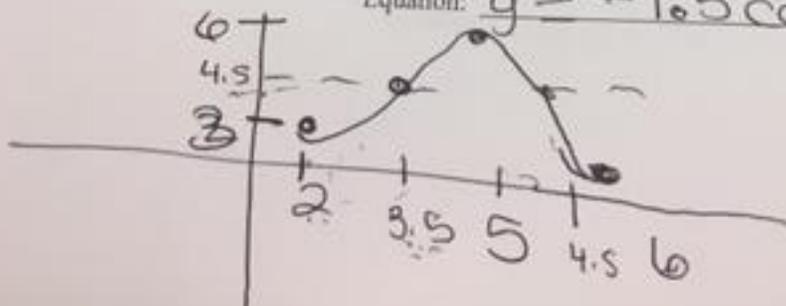

$$\begin{array}{r} 6.17 \\ + 4.21 \\ \hline 10.38 \end{array} \quad \begin{array}{r} 6.17 \\ - 4.21 \\ \hline 1.96 \end{array}$$

4. The zebra on the carousel has a minimum height of 3 feet at 2 minutes and 6 feet at 5 minutes. Find:

$(2, 3)$ $(5, 6)$

Amplitude: 1.5 Vert. Shift: up 4.5 Period: 4 Phase Shift: $\pi + 2$

Equation: $y = -1.5 \cos \frac{\pi}{2}(x-2) + 4.5$

$b = \frac{2\pi}{4}$
